MOSSI EPIL®

Azulene

Wax cartridge 110 gr.

Fine texture epilatory wax

Fine waxes dry faster, this forces the professional to apply a little at a time and remove the wax faster. Its characteristics make it adhere well to the hair, but leaving it on the skin for too long will make it difficult to remove the wax. It is important to highlight that all fine waxes pluck the hair well, but usually create a little discomfort for those who are having the epilation. It is advisable to use an equipment with individual cartridge heaters from 30W to 50W, with thermostat.

Usage : Melt the wax in the indicated device keeping it at the appropriate temperature. Refill wax (roll-on) is applied in the direction of hair growth. It is advised that the wax is spread evenly so that it is in the correct texture and thickness. Apply the depilatory paper over the wax that is on the skin and rub the paper on the surface so that the paper adheres well to the wax that was applied to the skin. Then place one hand on the opposite area in the direction that you are going to pull the paper off. Doing so will cause less pain, bruising and reduce skin laxity. Make sure the hair is well removed.

Aviso : Check that the power "Watt" and if your equipment has a thermostat. Power will identify what thickness of wax you should use (consult your salesperson). If the melting machine does not have a thermostat, it will overheat, causing more electricity consumption, increasing the temperature of the wax and altering the elasticity of the wax, especially on days when there are fewer epilations. Professionals must advise their clients that under no circumstances should they expose themselves to the sun or UV light (solarium) on the day of the epilation. No cosmetic product, or treatment that causes cold (cryotherapy) or hyperemia (thermal) should be applied to the skin on the same day and the day after the epilation. Disregarding this warning will increase the risk of stains and skin irritations.

Product for external use. For professional use.

INGREDIENTS: DETHYLENE GLYCOL ROSINATE, TRIETHYLENE GYCOL ROSINATE, GLYCERYL ROSINATE, PARAFFINUM LIQUIDUM (MINERAL OIL), C.I.42090.
