MOSSI EPIL®

## Creamy Pink Wax Discs 1 kg

### *Depilatory wax pasty texture*

The waiting time for pasty waxes is longer than for thin or intermediate waxes, and some resting time is necessary for the wax to be suitable for hair removal. Its characteristics mean that it adheres well to the hair and its thickness means that there is less temperature felt by the person. It's important to note that all pasty waxes are easy to use in both the winter and summer seasons. Being pasty, its texture makes epilation less painful, but there is more expense.

**Usage :** Melt the wax in the device indicated, keeping it at the appropriate temperature. It is advisable to apply with a disposable wooden spatula. To apply the wax to the skin, spread the wax with a spatula in the direction of the hair growth. When the wax has reached an appropriate texture in the area to be waxed, remove the wax by pulling in the opposite direction to the hair growth, holding the skin with the other hand.

**Warning :** Check the power " Watt " and whether your equipment has a thermostat. The wattage will identify the thickness of wax you should use (check with your dealer). If the melter doesn't have a thermostat, it will overheat, causing more electricity consumption, increasing the temperature of the wax and altering its elasticity, especially on days when there are fewer epilations. Professionals must advise their clients that under no circumstances should they be exposed to the sun or UV light (solarium) on the day of the epilation. No cosmetic product or treatment that causes cold (cryotherapy) or hyperaemia (thermal) should be applied to the skin on the day of or the day after the epilation. If you disregard this warning, you increase the risk of skin blemishes and irritation.

Product for external use. For professional use.

**INGREDIENTS:** Colophonium, Glycol rosinate, Microcrystalline wax, Paraffin, Liquid paraffin, Peg-8 Dioleate, Titanium Dioxide, C.I.45410:2
