MOSSI EPIL®

Red Fruit Wax Cartridge 110 ml

Fine texture depilatory wax

Thin waxes dry more quickly, forcing the professional to apply a little at a time and remove the wax more quickly. Its characteristics mean that it adheres well to the hair, but leaving it on the skin for too long will make it difficult to remove the wax. It's important to emphasise that all fine waxes pull the hair out well, but they usually create a little discomfort for those undergoing epilation. It is advisable to use a 30W to 50W thermostatically controlled device with hand pieces (heater for wax cartridges).

Usage : Melt the wax in the device indicated, keeping it at the appropriate temperature. Roll-on wax is applied in the direction of hair growth. It is advisable to spread the wax evenly so that it is the correct texture and thickness. Apply the depilatory paper over the wax that is on the skin and rub the paper on the surface so that the paper adheres well to the wax that has been applied to the skin. Then place one hand on the opposite area in the direction you are going to pull the paper off. This will cause less pain, bruising and reduce the increase in sagging skin. Make sure the hair has been well removed.

Warning : Check the power " Watt " and whether your equipment has a thermostat. The power will identify the thickness of wax you should use (check with your sales representative). If the heater doesn't have a thermostat, it will overheat, causing more electricity consumption, increasing the temperature of the wax and altering the wax's elasticity, especially on days when there are fewer epilations. Professionals must advise their clients that under no circumstances should they be exposed to the sun or UV light (solarium) on the day of the epilation. No cosmetic product or treatment that causes cold (cryotherapy) or hyperaemia (thermal) should be applied to the skin on the day of or the day after the epilation. If you disregard this warning, you increase the risk of skin blemishes and irritation.

Product for external use. For professional use.

INGREDIENTS: Pentaerythrityl rosinate, Colophonium, Paraffinum liquidum, Cera microcristallina, Parfum, Tocopheryl acetate, C.I. 45410:2, C.I. 28440
